

## What to expect at your private consultation?

Visit or book at a participating pharmacy. No referral needed

Consultations will take place in a fully equipped, private, consultation room

During your appointment, the pharmacist will take your medical history, assess your symptoms, ask relevant questions and discuss suitable options

With your consent, they can share this information with your GP or other healthcare providers

If appropriate, the pharmacist may prescribe medication for your condition and explain how to use it safely

Your pharmacist will arrange follow up appointments with you to monitor your progress

## Ask your pharmacist today!

No need for an appointment.

Just ask your pharmacist to see if they can help.

Take the first step towards better health.

**Think** Pharmacy First

## Eczema

Mild to moderate atopic dermatitis

Pharmacists can now help actively manage and treat eczema.

Ask Your Pharmacist

## How your pharmacist can help

### Your prescribing pharmacist will:

- **Listen** to your concerns and take a thorough medical history
- **Conduct** an assessment and examination, if appropriate
- **Review** and prescribe medicines, including creams and ointments, to manage symptoms
- **Help** identify possible irritants or allergens that may cause flare-ups and discuss how to avoid these
- **Create** an Eczema Action Plan to manage eczema
- **Provide** advice and information about prescribed medicines, over-the-counter medicines and other products
- **Provide** skin care advice
- **Update** your GP and healthcare team
- **Refer** you to other healthcare providers, if needed.

Eczema is a common skin condition that affects both children and adults. It causes dry, itchy, irritated skin and often flares up due to triggers like dry weather, changes in temperature, stress and skin irritants like soap, shampoo, grass, certain fabrics and chlorine in pools or spas. Triggers vary from person to person.

## Why choose community pharmacy?

### Accessible

Open early, late and on weekends

### Convenient

Appointments not always necessary, walk in or book ahead

### Private

Confidential consultations in a dedicated consultation room

### Affordable

A cost effective, convenient way to manage your health

### Professional

Authorised and trained pharmacists

### Connected

With your consent, we can notify your GP and arrange referrals where needed

## Who can offer the services?

Prescribing pharmacists are registered, qualified and authorised pharmacists who have completed postgraduate training so they can assess, diagnose and treat a range of everyday and long-term health conditions.

The advanced training focuses on clinical assessment, diagnosis, medication management and prescribing, undertaken in close partnership with a designated prescriber.

Before this, they have already completed a four-year pharmacy degree or a master's degree, a year of supervised internship, national registration exams and ongoing professional development.

### Safe and trusted care

In many countries, community pharmacists have safely provided these health services for decades\*, helping patients access timely care close to home.

Training and education standards for pharmacists are set by the Australian Pharmacy Council, under the authority of the Pharmacy Board of Australia, which operates within the Australian Health Practitioner Regulation Agency (Ahpra).
